Facilities Management Information Report

Preface

The following report contains data on Buildings, Land and Outdoor Recreation and Athletic Facilities in service at the University of Nebraska as of June 30, 2017.

This report provides management information and also serves as the basis for property insurance for University Facilities. Replacement costs include the construction cost (labor, materials, supervision, contractor's overhead and profit), fixed equipment, insurance and professional fees. It does not include the cost of movable equipment, land acquisition, artwork, utilities beyond the 5 foot line, sitework or the cost of moving. Fire insurance exclusions may allow for the reduction of the replacement cost by the cost of excavation and foundations below ground.

This information will be updated every year by representatives of the University of Nebraska campuses and then consolidated into publication format by the Office of Vice President for Business and Finance, Central Administration.

Facilities Management Information Report

Building Inventory Summary

Buildings Owned By	Number of Buildings	Gross Building Area	Replacement Cost as of June 30, 2017
University of Nebraska - Kearney

HOW TO READ THE CAMPUS MAPS:
If you know the name of the building, look for it in the alphabetical list. If you're looking for the building by number, they are read from left to right/bottom to top and divided by color rows for easy finding.

Visitor/Guest Parking

There are a number of areas where visitors may park indicated in pink on the map. For complete information, please visit parking.unl.edu/visitors.

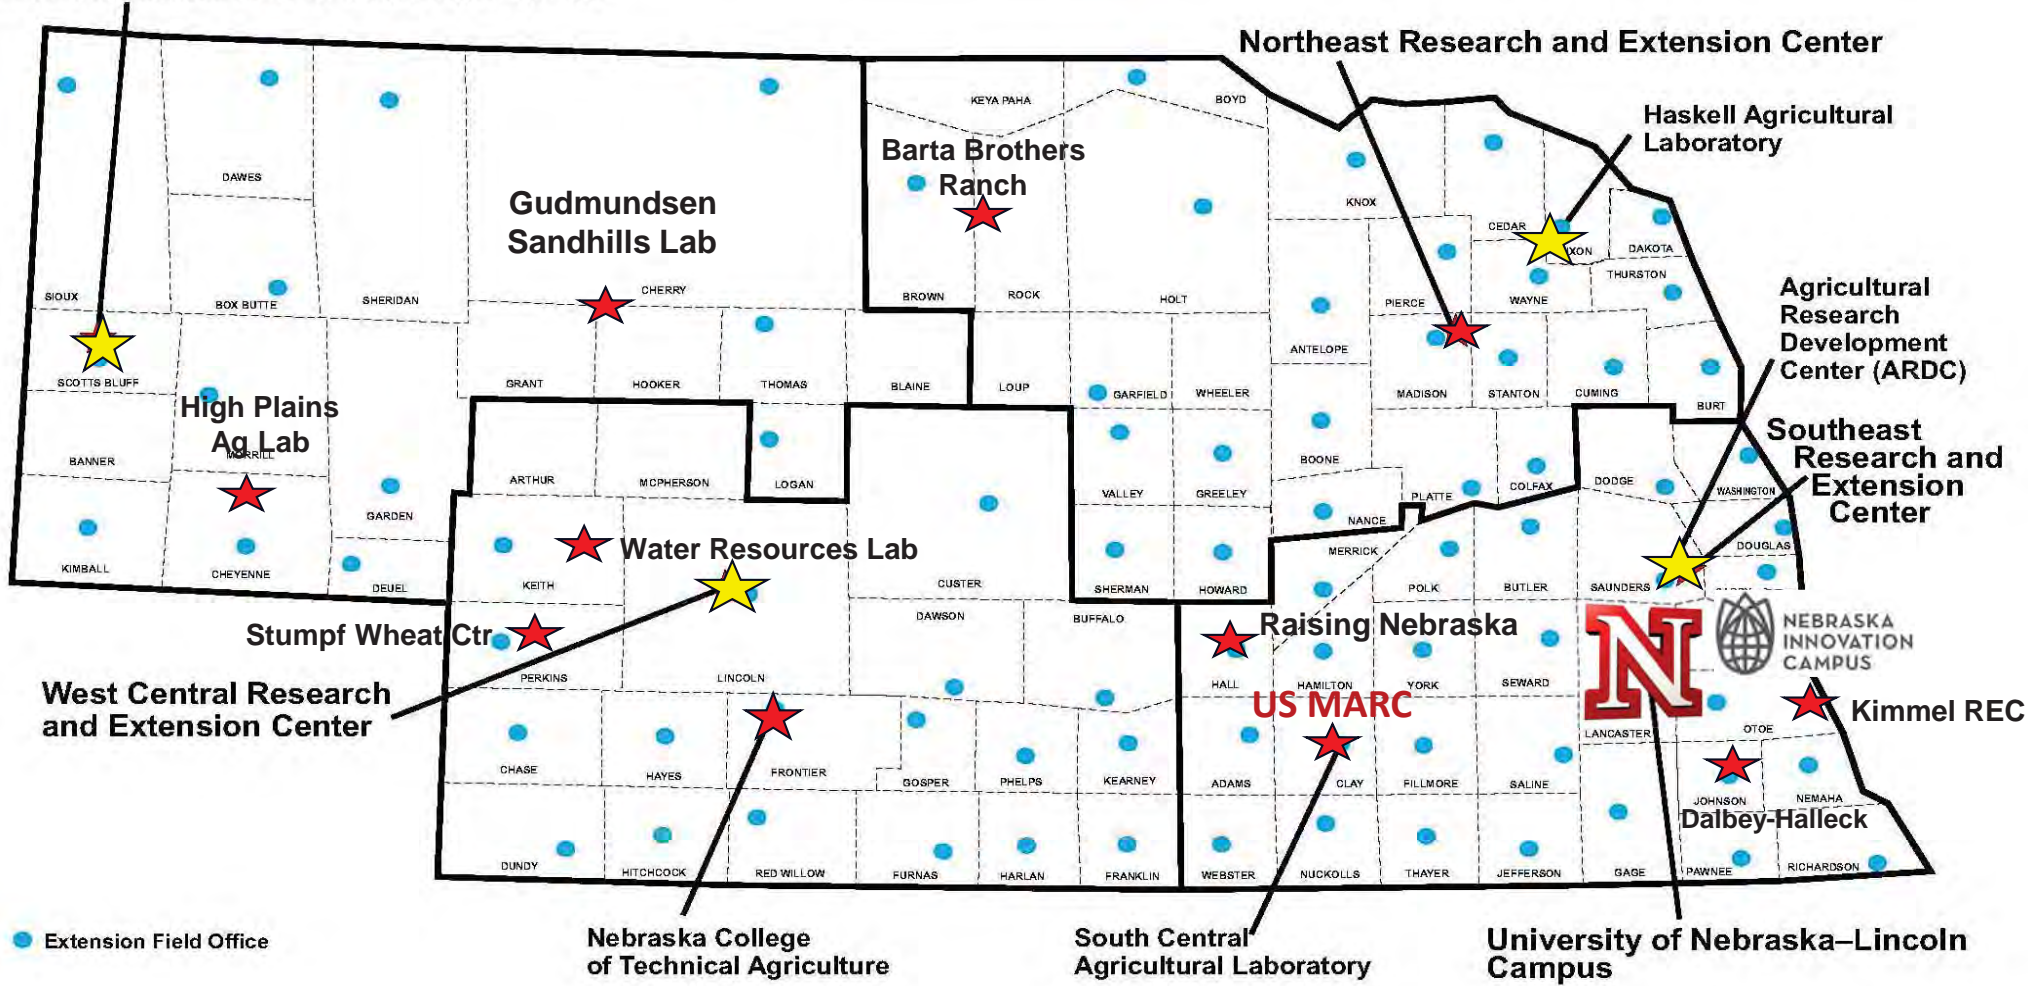

All UNL parking facilities, except metered areas and time-controlled zones, require a valid University of Nebraska parking permit 24 hours a day, 7 days a week.

Most parking on the UNL campus is designated for faculty and staff, or residential and commuter students. These individuals pay monthly rates for the privilege of parking on campus and they are issued permits that allow them to park in designated lots.

The University of Nebraska does not discriminate based upon any protected status. Please see go.unl.edu/nondiscrimination. ©2017, The Board of Regents of the University of Nebraska. All rights reserved.

Facilities Management Information Report

Glossary

CURRENT REPLACEMENT COST - The replacement cost includes labor, materials, supervision, contractor's overhead and profit, insurance, and all professional fees. It excludes moveable equipment, boilers, chillers, electric power generation equipment, land values, art work, utilities beyond the 5 foot line, site work, and the cost of moving. Replacement costs for 2005 are determined from the Marshall and Swift Building Cost Index and updated in 2006, 2007, 2008, 2009, 2010, 2011, 2012, 2013, 2014, 2015, 2016, and 2017 using industry inflation factors. The University of Nebraska Medical Center (UNMC) updated their facilities using Marshall and Swift Building Cost Index for 2011. The University of Nebraska at Omaha updated their facilities using Marshall and Swift building Cost Index for 2013.

INSURANCE - All buildings are insured by the University of Nebraska unless indicated otherwise.

GROSS BUILDING AREA

Definition: The sum of all areas on all floors of a building included within the outside faces of its exterior walls, including floor penetration areas, however insignificant, for circulation and shaft areas that connect one floor to another.

Basis for Measurement: Gross area is computed by physically measuring or scaling measurements from the outside faces of exterior walls, disregarding cornices, pilasters, buttresses, etc., which extend beyond the wall faces. Exclude areas having less than a six-foot, six-inch clear ceiling height unless the criteria of a separate structure are met.

Measured in terms of gross square feet (GSF),

$$\text{Gross Area} = \text{Net Usable Area} + \text{Structural Space.}$$

Description: In addition to all the internal floored spaces obviously covered above, gross area should include the following: excavated basement areas; mezzanines, penthouses, and attics; garages; enclosed porches, inner or outer balconies whether walled or not, if they are utilized for operational functions; and corridors whether walled or not, provided they are within the outside face lines of the building, to the extent of the roof drip line. The footprints of stairways, elevator shafts, and ducts (examples of building infrastructure) are to be counted as gross area on each floor through which they pass.

Limitations: Exclude open areas such as parking lots, playing fields, courts, and light wells, or portions of upper floors eliminated by rooms or lobbies that rise above single-floor ceiling height.

Exception: Include top, unroofed floor of parking structures where parking is available.

TYPE OF STRUCTURE - The type of structure is the basic criteria dividing all buildings into five basic cost groups by type of framing (supporting columns and beams), walls, floors and roof structures, and fireproofing.

Class "A" buildings have fireproofed structural steel frames with reinforced concrete or masonry floors and roofs.

Class "B" buildings have reinforced concrete frames and concrete or masonry floors and roofs.

Class "C" buildings have masonry or concrete exterior walls, and wood or steel roof and floor structures, except for concrete slab on grade.

Class "D" buildings generally have wood frame, floor, and roof structure. They may have a concrete floor on grade and other substitute materials, but is considered combustible construction. This class includes the pre-engineered pole frame buildings.

Class "S" buildings have frames, roofs, and walls of incombustible metal. This class includes the pre-engineered metal buildings.

Class "O" buildings are other miscellaneous construction.

In each class there will be variations, combinations and sub-classes.

In most localities, some buildings are built which are hybrids in construction, such as those with complete Class A framing, including columns and girders, but with wood floor joists and sheathing.

Facilities Management Information Report

Glossary (continued)

CLASS "A" BUILDINGS

The primary feature of Class A buildings is the fireproofed structural steel frame, which may be welded, bolted, or riveted together. The fireproofing may be masonry, poured concrete, plaster, sprayed fiber, or any other type which will give a high fire-resistant rating.

Floors and roofs in Class A structures are normally reinforced concrete on steel decking or formed slabs resting on the frame or poured so as to become integral with it. They may also be composed of prefabricated panels and may be mechanically stressed.

Exterior walls will be curtain walls of masonry, concrete, steel studs and masonry, tile or stucco, or one of the many types of panels of metal, glass, concrete, and other materials. Interior partitions will frequently be of masonry or gypsum block although many moveable and lightweight partitions are used.

Included in this classification are Uniform, Basic and Standard Building Code construction, Types I and II (noncombustible) and ISO Classes 5 and 6 if the framing is protected steel. ISO Class 5 and 6 buildings with load-bearing walls and no interior framing and most low rise buildings should be classified as Class C for pricing purposes. This class is also referred to as Modified Fire Resistive or Two-Four Hour construction.

CLASS "B" BUILDINGS

The primary characteristic of a Class B building is the reinforced concrete frame in which the columns and beams can be either formed or precast concrete. They may be mechanically stressed. It is a fire resistant structure.

Floors and roofs in Class B structures are formed or precast concrete slabs. The exterior walls will generally be masonry or reinforced concrete curtain walls or any of the many types of wall panels of concrete, metal, glass, or stone, etc. In some Class B buildings, the walls may be partially load-bearing. Interior partitions are often masonry, reinforced concrete or gypsum block, but many lightweight and movable partitions are used where structural walls are not needed.

Included in this classification are Uniform, Basic and Standard Building Code Types I and II (noncombustible) and ISO Classes 5 and 6 if the framing is concrete. ISO Class 5 and 6 buildings with load-bearing walls and no interior framing and most low rise buildings should be classified as Class C for pricing purposes. This class is also referred to as Fire Resistive or Two-Four Hour construction.

CLASS "C" BUILDINGS

Class C buildings are characterized by masonry or reinforced concrete (including tilt-up) construction. The walls may be load-bearing, i.e., supporting roof and upper floor loads, or non-bearing with open concrete, steel, or wood columns, bents or arches supporting the load. Floors and roofs are supported on wood or steel joists or trusses, or the floor may be concrete slab on the ground. Upper floors or roofs may be of concrete plank, steel deck, or wood. Bearing walls are frequently strengthened by concrete bond beams or pilasters. Included in this classification are Uniform and Basic Building Code Types III (noncombustible wall) Standard Code Types V and ISO Classes 2 and 4, and those Class 5 and 6 buildings which have load-bearing walls without interior framing and of low rise (3 stories or less) design. This class is also referred to as Masonry or Unprotected Noncombustible, Joisted or Unprotected Masonry, or Ordinary or Unprotected-One Hour and to include certain Two Hour or Mill construction.

CLASS "D" BUILDINGS

Class D buildings are characterized by combustible construction. The exterior walls may be made up of closely spaced wood or steel studs as in the case of a typical frame house, with an exterior covering of wood siding, shingles, stucco, brick or stone veneer, or other materials. Otherwise, they may consist of an open skeleton wood frame on which some form of curtain wall is applied including the pre-engineered pole buildings.

Floors and roofs are supported on wood or steel joists or trusses or the floor may be a concrete slab on the ground. Upper floors or roofs may consist of wood or metal deck, prefabricated panels or sheathing.

Construction Type V (wood-frame) of the Uniform, Type IV Basic and Type VI Standard Building Code is included in this classification and ISO Class 1 buildings. This class is also referred to as Unprotected Protected One Hour Construction.

Class D is further used to include all buildings that do not fit into any other classification.

CLASS "S" BUILDINGS

Class S buildings are characterized by incombustible construction and prefabricated structural members. The exterior walls may be steel studs or an open steel skeleton frame with exterior single or sandwich wall coverings consisting of prefabricated panels or sheet siding. Floors and roofs are supported on steel joists or beams, or the floor may be a concrete slab on grade. Upper floors or roofs may consist of metal deck, prefabricated panels or sheathing.

Included in this classification is Uniform and Standard Building Code construction. Type IV (non-combustible), Basic Code Type V and ISO Class 3 buildings. This class is also referred to as Noncombustible and can be One Hour Type II construction.
